

## 2-Bay (Dual) Hard Disk Drive / Solid-State Drive RAID System

# Technology at work for you

Maintains equipment and system in operation; 24 hours daily

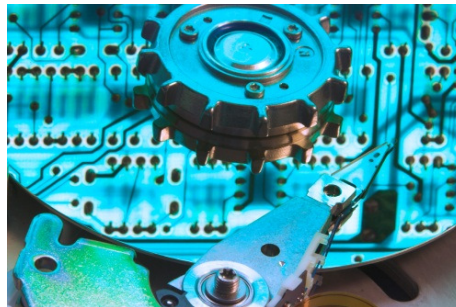

No more worries about equipment/system downtime caused by hard disk drive failure. The 2-Bay (Dual) Hard Disk Drive / Solid-State Drive RAID System uses RAID-1 (Mirroring) technology to mirror data to both hard disk drives simultaneously; avoiding equipment/system downtime and also preserving (backup) important information, in the event of hard disk drive failure.

### PRODUCT FEATURES:

- Designed for Manufacturing, Research and Development, Aeronautical, Marine, Bio-medical, Semiconductor industry and any other applications which require data storage protection and optimal equipment/system uptime.
- Uses SATA hard disk drive and Solid-State Drive [SSD] (2.5").
- Adjustable SATA hard disk drive or Solid-State Drive [SSD] capacity: Disk drive capacity can be modified by proprietary firmware to solve the potential compatibility issues in different systems.
- SATA, SCSI & IDE interfaces are available.
- Driverless, 100% hardware RAID system; which allows plug and play capability.
- Hot swappable disks capability.
- Compatible with all Operating Systems, eg. Windows, Windows NT, SUN, Linux and etc.
- Dimensions: 14.6cm (Length) x 10.2cm (Breath) x 2.7cm (Height).
- On-site installation by Dsourcing engineers.

## flexible solutions for your business needs

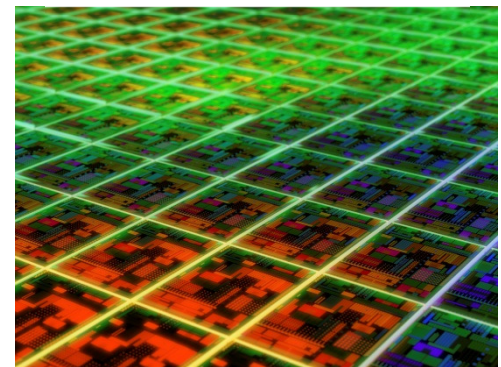

### ASSET MANAGEMENT

Successful installation of the RAID system will extend the useful life of capital assets. Effective asset management in an uncertain economy can help you improve return on asset (ROA) and drive down the overall operating costs.

### ENTERPRISE MANAGEMENT

Data security protection and effective system operations are important in optimizing enterprise management; which serves to make sure that your system does not fail. Enterprise management also reduces costs, speed up operations, and decreases your total cost of ownership.
